

A) DETERMINE ALONGSHORE-VARYING BEACH MORPHOLOGY AT 100-M SPACING

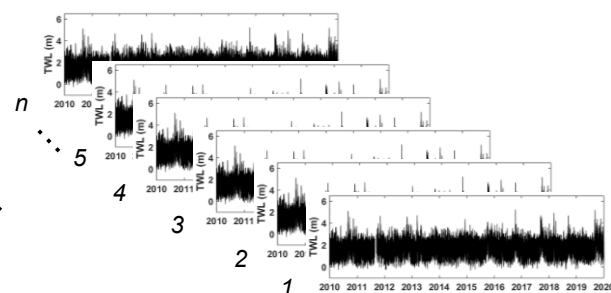

Morphological Thresholds

MHHW
Dune toe
Dune crest

Beach Slopes

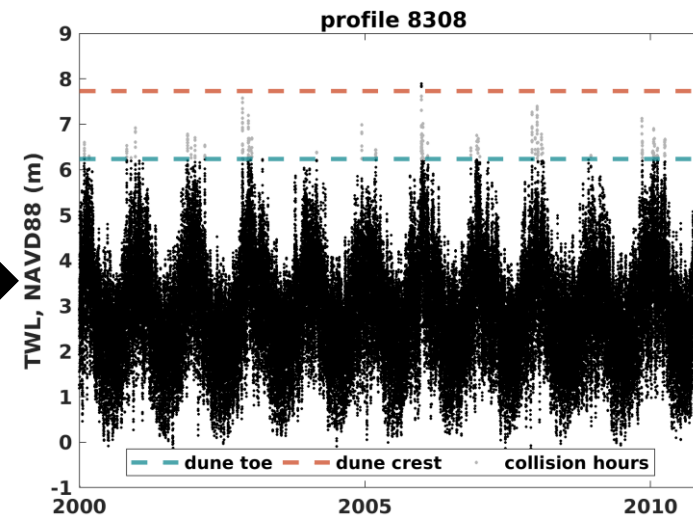

B) COMPUTE TWL TIME SERIES AT INDIVIDUAL BEACH PROFILES

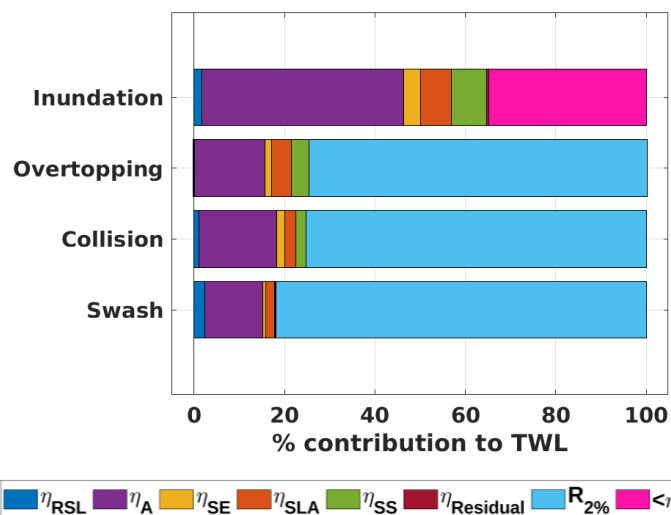

30 km stretch of coastline ÷ 100-m spaced beach profiles
≈ 300 profiles,
≈ 300 hourly TWL time series

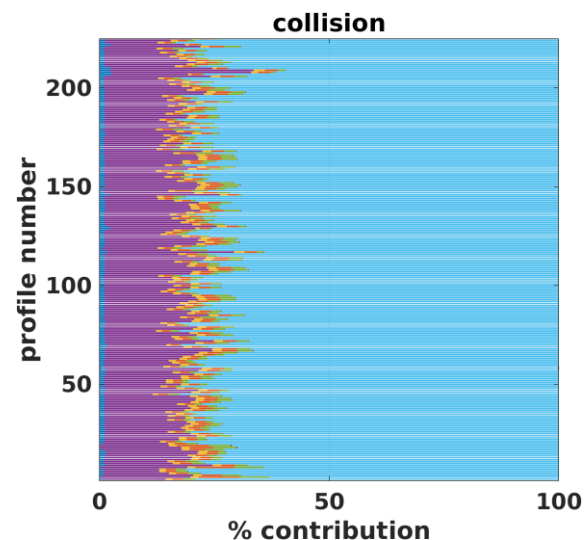

C) IDENTIFY TWL IN STORM IMPACT REGIMES

F) QUANTIFY AVERAGE RELATIVE COMPOSITION BY REGIME

E) QUANTIFY AVERAGE RELATIVE COMPOSITION AT INDIVIDUAL BEACH PROFILES

D) AVERAGE MAGNITUDE OF TWL DRIVING PROCESSES IN STORM IMPACT REGIMES BY YEAR
